INTRODUCTION

A little over a decade ago in 2009, Bitcoin was born and since then virtually everyone in the world has grown to know the name. Blockchains became the latest and greatest in massively impactful transformative technologies and cryptocurrencies are paving the way.

It's no wonder that the majority of the total value locked in all of blockchain projects are concentrated in decentralized finance (DeFi) protocols. Analysts have valued the 2020 cryptocurrency market at \$1.5 billion with projections reaching \$4.9 billion by 2030. During this same period we are expecting a CAGR of 12.8%.

With global interest in cryptocurrencies increasing every year, we are living in exciting times. Opportunities are being created but this time it's different. Retail investors are getting invested, governments are looking at ways to tax, corporations are creating funds, and even celebrities are promoting cryptocurrencies.

Right now is the time to get in on the action because the space is still relatively young. However, navigating through different protocols and figuring out the best strategies was only understood by experts. Investing in cryptocurrencies, especially in the DeFi, has always been relatively complex and downright intimidating.

Until now...

WHO WE ARE

CRYPTOR is a user-friendly investment portal that acts as a central hub for decentralized trading, investing, research, and analysis. We understand the difficulties of navigating through various DeFi protocols to learn about specific tokens and perform analyses based on sound research.

We built this platform to consolidate the most important features of DEXs, exchanges, wallets, and NFT marketplaces. This way, you can focus your attention on the actual investing part, rather than grinding away through hours of scattered research.

CRYPTOR's team is led by dedicated professionals in the cryptocurrency and emerald mining industry.

- 👉 **PATRIC J.L (CEO)** is the head of vision, marketing, and design. With over 6 years in the emerald business, he has successfully merged this industry with cryptocurrency investing.
- 👉 **OMID B (COO)** acts as the head of the emerald mining business. Degreed with a bachelor in business administration, he manages the day to day operations of the emerald business.
- 👉 **M. ANAS AFZAL (CTO)** is the head of technology and development. As a Full Stack developer, he has intricate knowledge and experience in the mechanics of anything and everything related to blockchains.

CRYPTOR

02

PROBLEM

The earning potential with cryptocurrencies in the DeFi space is massive but the problem is that it isn't for beginners. Majority of retail investors don't understand how to look for winning projects and their trades are mainly driven by external influences. These can be from the media, social media, family, or friends.

What's missing is the basics of fundamental analysis and market research. For those that are a bit more research orientated are still burdened by the maze of investing research. It isn't uncommon to have ten websites open at one time to research just one cryptocurrency.

SOLUTION

CRYPTOR provides a novel solution to the web of endless information. Our platform is clean, easy to understand, and highly impactful because our proprietary algorithm ensures that your research is paired with data that is relevant for your success.

Having too much information is non-conducive to a winning mindset and investing person. We cut out all the noise and only feature tools that help you to make the right decisions. We don't like to waste time jumping from one protocol to another so we have combined the best features of DEXs, NFT marketplaces and DeFi - all at your fingertips!

WHY CHOOSE US?

Remember the massive surges in prices action that Dogecoin had a couple of years ago? What about Solana, Shiba Inu, or Safemoon? If you invested in any of these then, you would be a different person today - probably a happy one at that!

The difference between them and you, is that they invested just at the right time and you didn't. Whether they knew that these tokens would go to the moon is anyone's guess but the fact is no one really knows when a token will be hyper successful. This is largely due to how new cryptocurrencies are in the global market, and how their decentralized nature makes it impossible to establish any business fundamentals like we see in stocks.

Does that mean we can't perform any sort of analysis on cryptocurrencies? Absolutely not! As with any investment, researching the projects, their health, and performance metrics are necessary. Analyzing their blockchain footprints tell us another story which helps paint a trajectory. All of this can be done by anyone but the issue is, there isn't any central hub where all of the hard work can be done.

Until now.

CRYPTOR

03

Whether you're an active trader, seasoned investor, or someone who has interest in cryptocurrencies but don't know where to begin, we have you covered! CRYPTOR's user-friendly utility platform ensures that you won't miss the huge opportunities that created overnight millionaires. However, make sure do your own research on every newly launched project. Our platform can only take you so far and without practice, you won't stand a chance in succeeding.

PLATFORM FEATURES

Cryptor's core features are neatly wrapped in a single and easy-to-understand interface. Once you log into the application, you will be presented with four main sections as follows:

The screenshot displays the Cryptor platform's user interface. At the top, there is a navigation bar with four tabs: "Launched" (highlighted in green), "Charts", "Token Info", and "Wallets". Below the navigation bar, there are four main content sections, each containing a token card for "Cryptor (VICI)".

Launched Section:

- Market Cap: \$ 1,600,000,000
- Launch Time: 08:24 AM
- Liquidity: \$ 13395473.2001
- Holders: 433.2

Charts Section:

- Market Cap: \$ 1,600,000,000
- Launch Time: 08:24 AM
- Liquidity: \$ 13395473.2001
- Holders: 433.2

Token Info Section:

- Market Cap: \$ 1,600,000,000
- Launch Time: 08:24 AM
- Liquidity: \$ 13395473.2001
- Holders: 433.2

Wallets Section:

- Market Cap: \$ 1,600,000,000
- Launch Time: 08:24 AM
- Liquidity: \$ 13395473.2001
- Holders: 433.2

The four menus are Launched, Charts, Token Info, and holders they have all the information, research tools, and on-chain metrics that you will need to help you find those hidden gems.

LAUNCHED

The Launched menu contains the tokens that our algorithm has picked up and categorized as "early possible gem". These early gem tokens are what makes your investing experience not only simple but massively efficient.

CRYPTOR

04

That's because the most pertinent information is neatly presented to you such as:

- ⌚ TOKEN NAME
- ⌚ MARKET CAP
- ⌚ LIQUIDITY
- ⌚ HOLDERS
- ⌚ LAUNCH TIME
- ⌚ ADDRESS
- ⌚ OWNERSHIP

The quick overview should give you enough insight to determine your next steps which include adding them to your watch list, swapping them out for another token via our DEX, allocating some of those tokens to our trading bot, or sharing the hidden gem with your friends.

During your research you may want to add a token to the watchlist because you might not be ready to invest in it. Pressing the eye icon allows you to do this while also giving insight on the marketcap and holders growth performance (see following pages for more details).

CHARTS

If you want to look into the performance of a token in more detail clicking on any of the early gems will bring you to the Charts menu.

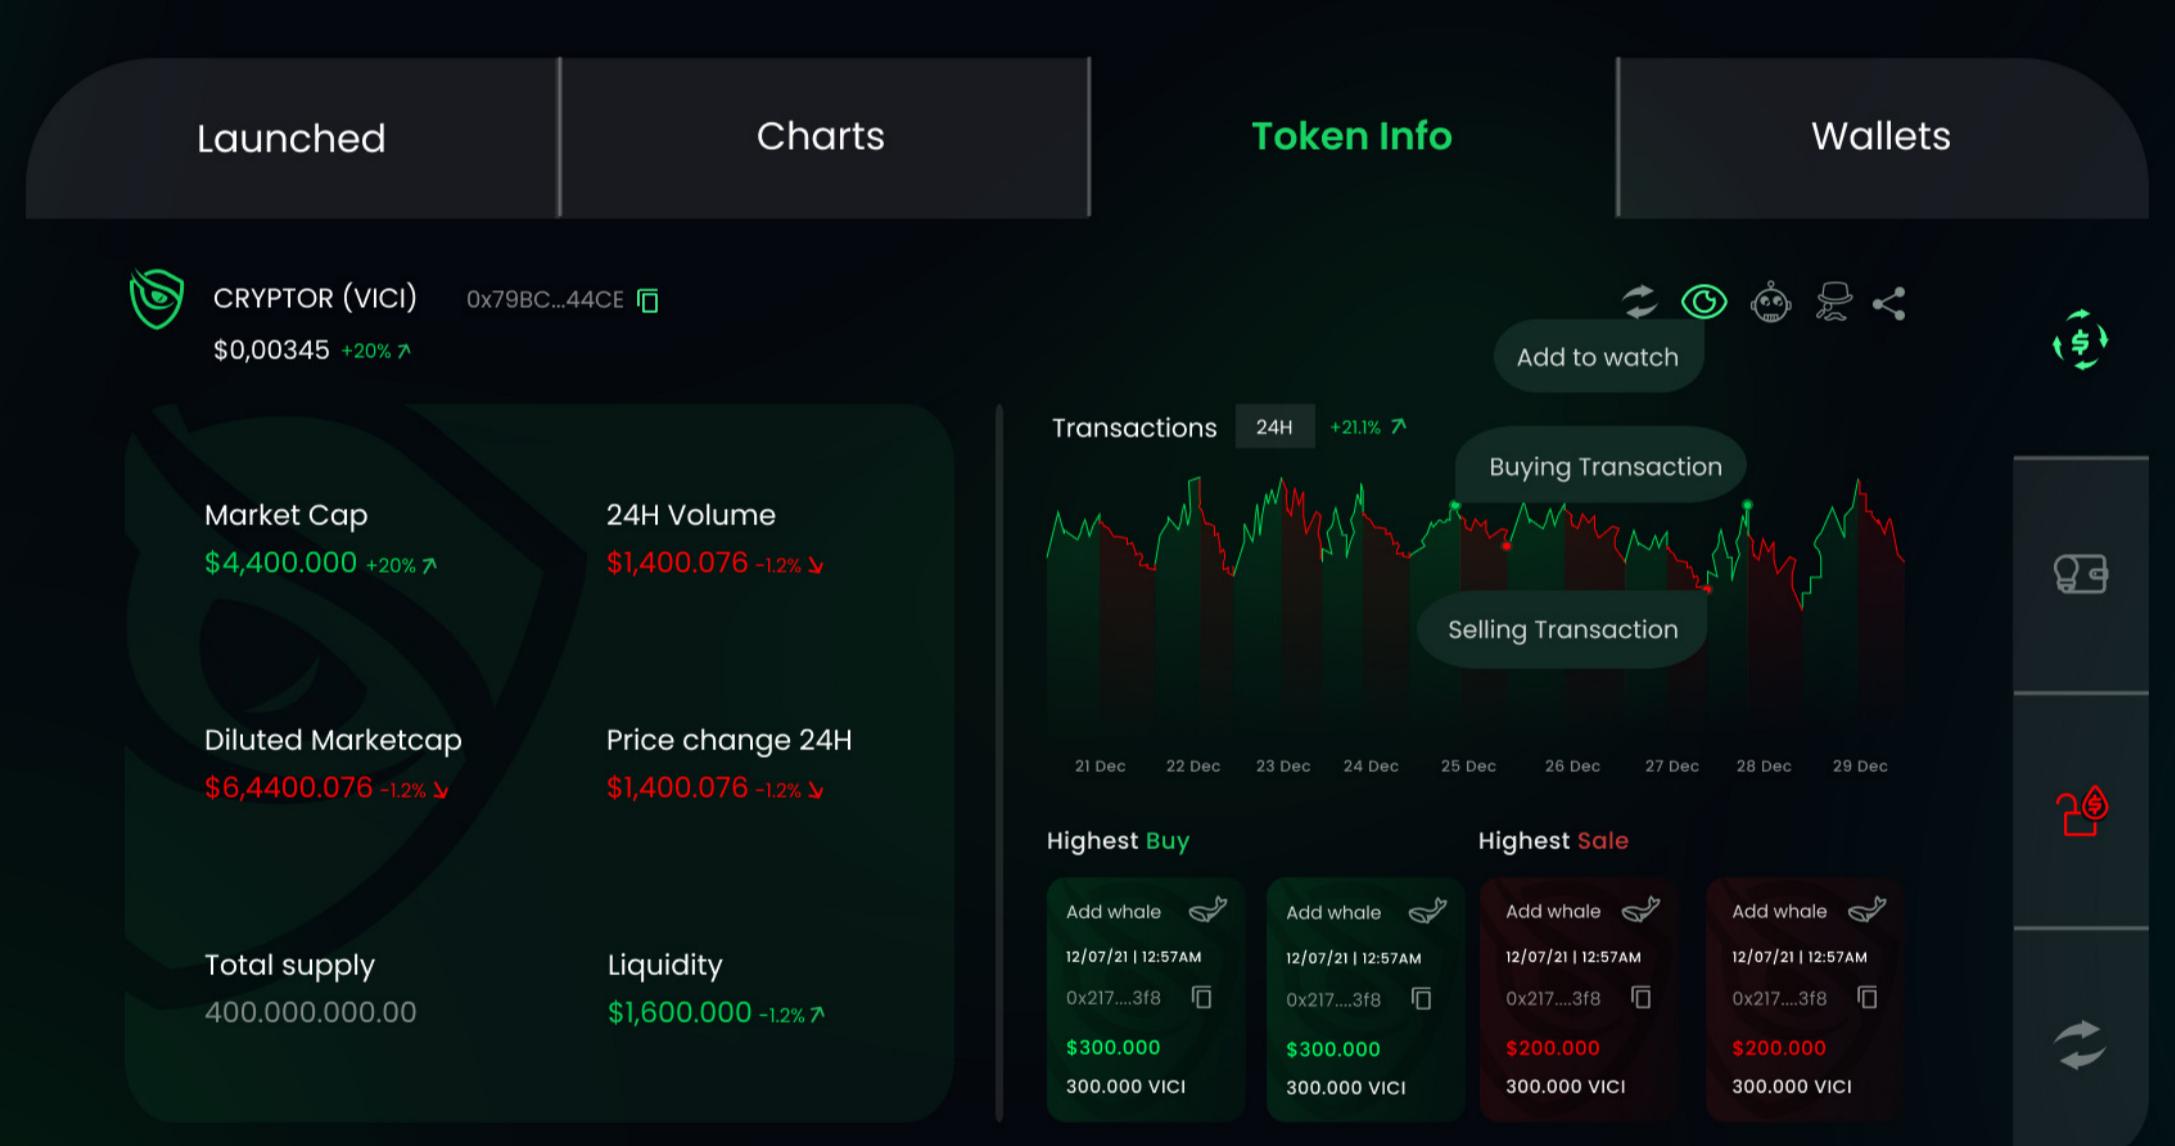

Here you can find general information that can help you with your technical analysis. This includes the ability to view price plots and analyze trends based on various time intervals. You can also easily tell how the coin performed given the selected timeframe as indicated by the colored arrows. Keeping track of the trading volume is a simple and to the point with the colored graphs.

TOKEN INFO (TRANSACTION & CO)

After analyzing the performance over time, you can further your research by reviewing the Token Info. In this menu, you can see more details of the token that you're researching and they include the price, token's contract address, market cap, 24H volume, diluted market cap, price change 24H, total supply, and liquidity.

Both buying and selling transactions are also available for your review. Clicking on the colored sections on the transaction graph will automatically populate what the highest buys were in that selected timeframe along with the highest sales. You'll have the option to investigate the transaction movements through EtherScan by clicking the contract. Additionally, you can add these movers to your whale watch which allows you to observe what they do before you commit.

Watch the whales to see what they have done with their tokens (ie. sold, moved, etc.). This quick overview will help you understand what other wallets are doing which can then incorporated in your investing strategy.

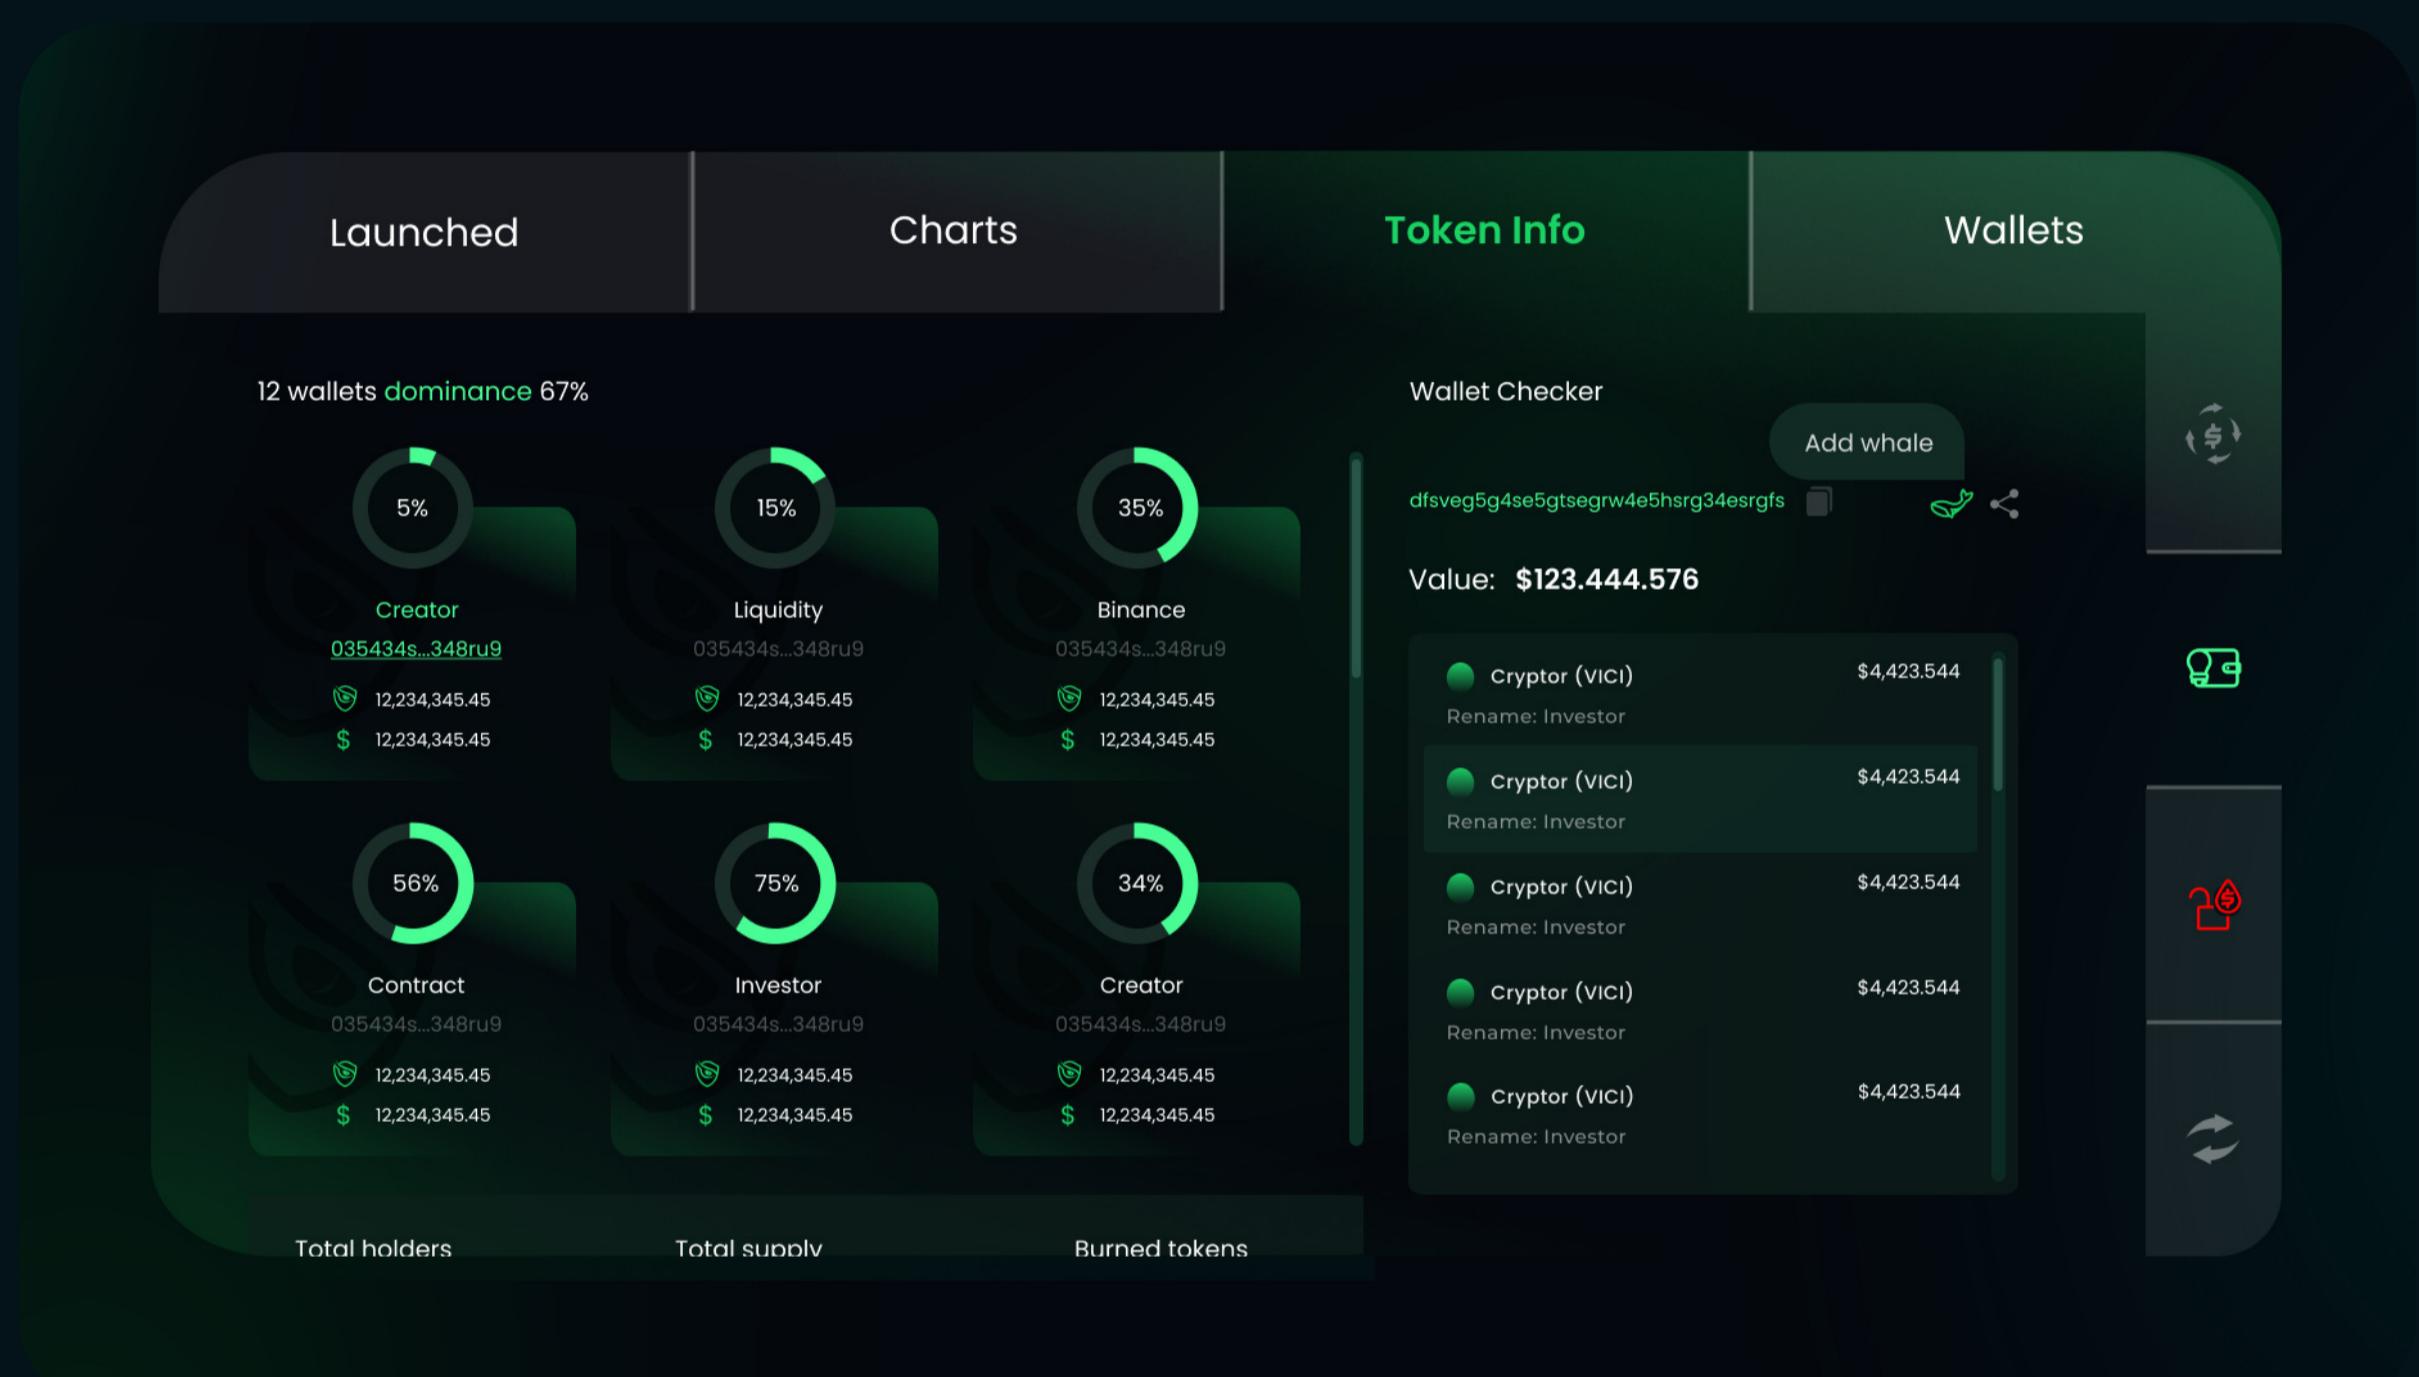

CRYPTOR

06

TOKEN INFO (HOLDERS & CREATOR)

Within the Token Info menu there is a sub-menu which allows you to create contracts. Here you can create up to 12 profiles of the whales that you are researching. Once set, you'll have an easy overview of their contract, token holdings, and their respective value. Each of the wallets will be weighted against each other based on their holdings so you will see the highest holders by rank in descending format (from highest to lowest).

Clicking in each contract enables the Wallet Checker which allows you to investigate what each wallet has bought, when they bought it, and who bought them. At any time you can add any of these wallets to your Whale Wallet to see what they are doing. You can also share them with your friends via social media.

Watch the whales to see what they have done with their tokens (ie. sold, moved, etc.). This quick overview will help you understand what other wallets are doing which can then incorporated in your investing strategy.

TOKEN INFO (LIQUIDITY)

If you lock up your tokens in a liquidity pool like Pancakeswap, you will often find it cumbersome to hop around different DEXs to review your holdings.

CRYPTOR

07

In this Liquidity sub-menu, you can track all of your liquidity provider token pairs in one location. You'll have quick access to how many tokens you have locked up (or unlocked), where the liquidity is deposited, how long its been locked for, along with its respective liquidity value.

The green lock icon indicates that the liquidity is unlocked while the red lock icon indicates that your liquidity is locked – be mindful of these colors since it can affect your investing strategies. You can also see how long you have left until the tokens can be unlocked. Additionally, you can track how much movement there was in the liquidity pool in the past 24 hours. Clicking on the Unicrypt button allows you to see where the liquidity is locked via their website. There you can also get more detailed and complete information about the liquidity locked.

TOKEN INFO (SWAP ENGINE)

The last feature under the Token Info menu is the Swap Engine. Here all of your favorite DEXs are listed in one location so you can approach your swapping from a high level overview. Pertinent information such as the price, liquidity, and APY are displayed to give you the snapshot of information that you need. The lowest token prices within these DEXs can be found here.

CRYPTOR

08

"TOKEN INFO (SWAP ENGINE)"

The list of DEXs can also be refined to suit your targeted research parameters such as by best rate, liquidity, and APY. Once you have found the best rate you can simply hit the swap button which will take you to the swap site and from there you can make a trade without ever leaving the application!

WALLETS (WHALES)

When you click on the whale button on the Token Info menu, you will be re-directed to the Whale Wallet. Here you can see each whale's respective positions (buying and selling) along with the network that's being used. You can also access this page simply by clicking on the Wallets menu.

The performance indicators are based since the time you have them to the watch list. With this information, you can quickly get a sense of how the tokens are performing doing which can help you determine your next moves. From here you can either get more information about the token, swap it out, or remove it from the watch list.

CRYPTOR

09

The screenshot shows the CRYPTOR app interface with the "Wallets" tab selected. At the top, there's a summary for a "Whale Wallet" with a balance of \$88,223.63, a +10% 24h change, and a "Sort by network" dropdown. Below this, four transaction logs are displayed:

- Oct 5, 2021 Receive From 0x950...gc92 → +0.42 Bnb
- Oct 5, 2021 Send From 0x950...gc92 → +0.42 Bnb
- Oct 5, 2021 Receive From 0x950...gc92 → +0.42 Bnb
- Oct 5, 2021 Send From 0x950...gc92 → +0.42 Bnb

On the right side, there are three vertical panels: one with a wallet icon, one with a whale icon, and one with a clock icon.

"WALLETS (WHALES)"

WALLETS (WATCH)

When in the Token Info menu, you have the ability to add wallets to the watch list. All the wallets that are on your watch list are arranged in a list format as shown below. Here you can see the basic information such as the token name and price, the market cap performance, and the holders performance.

If you are unsure about a new project then add them to this watch list. You can track the performance via the marketcap and holder activity.

The screenshot shows the CRYPTOR app interface with the "Wallets" tab selected. It displays three entries in a watch list format:

- Oct 19, 2021 CRYPTOR (VICI) Token price \$0.001348
- Oct 19, 2021 CRYPTOR (VICI)
- Oct 19, 2021 CRYPTOR (VICI)

Each entry includes a small thumbnail, the date, the token name, its current price, and a chart showing Market Cap (Mcap) and Holders data. On the right side, there are three vertical panels: one with a wallet icon, one with a whale icon, and one with a clock icon.

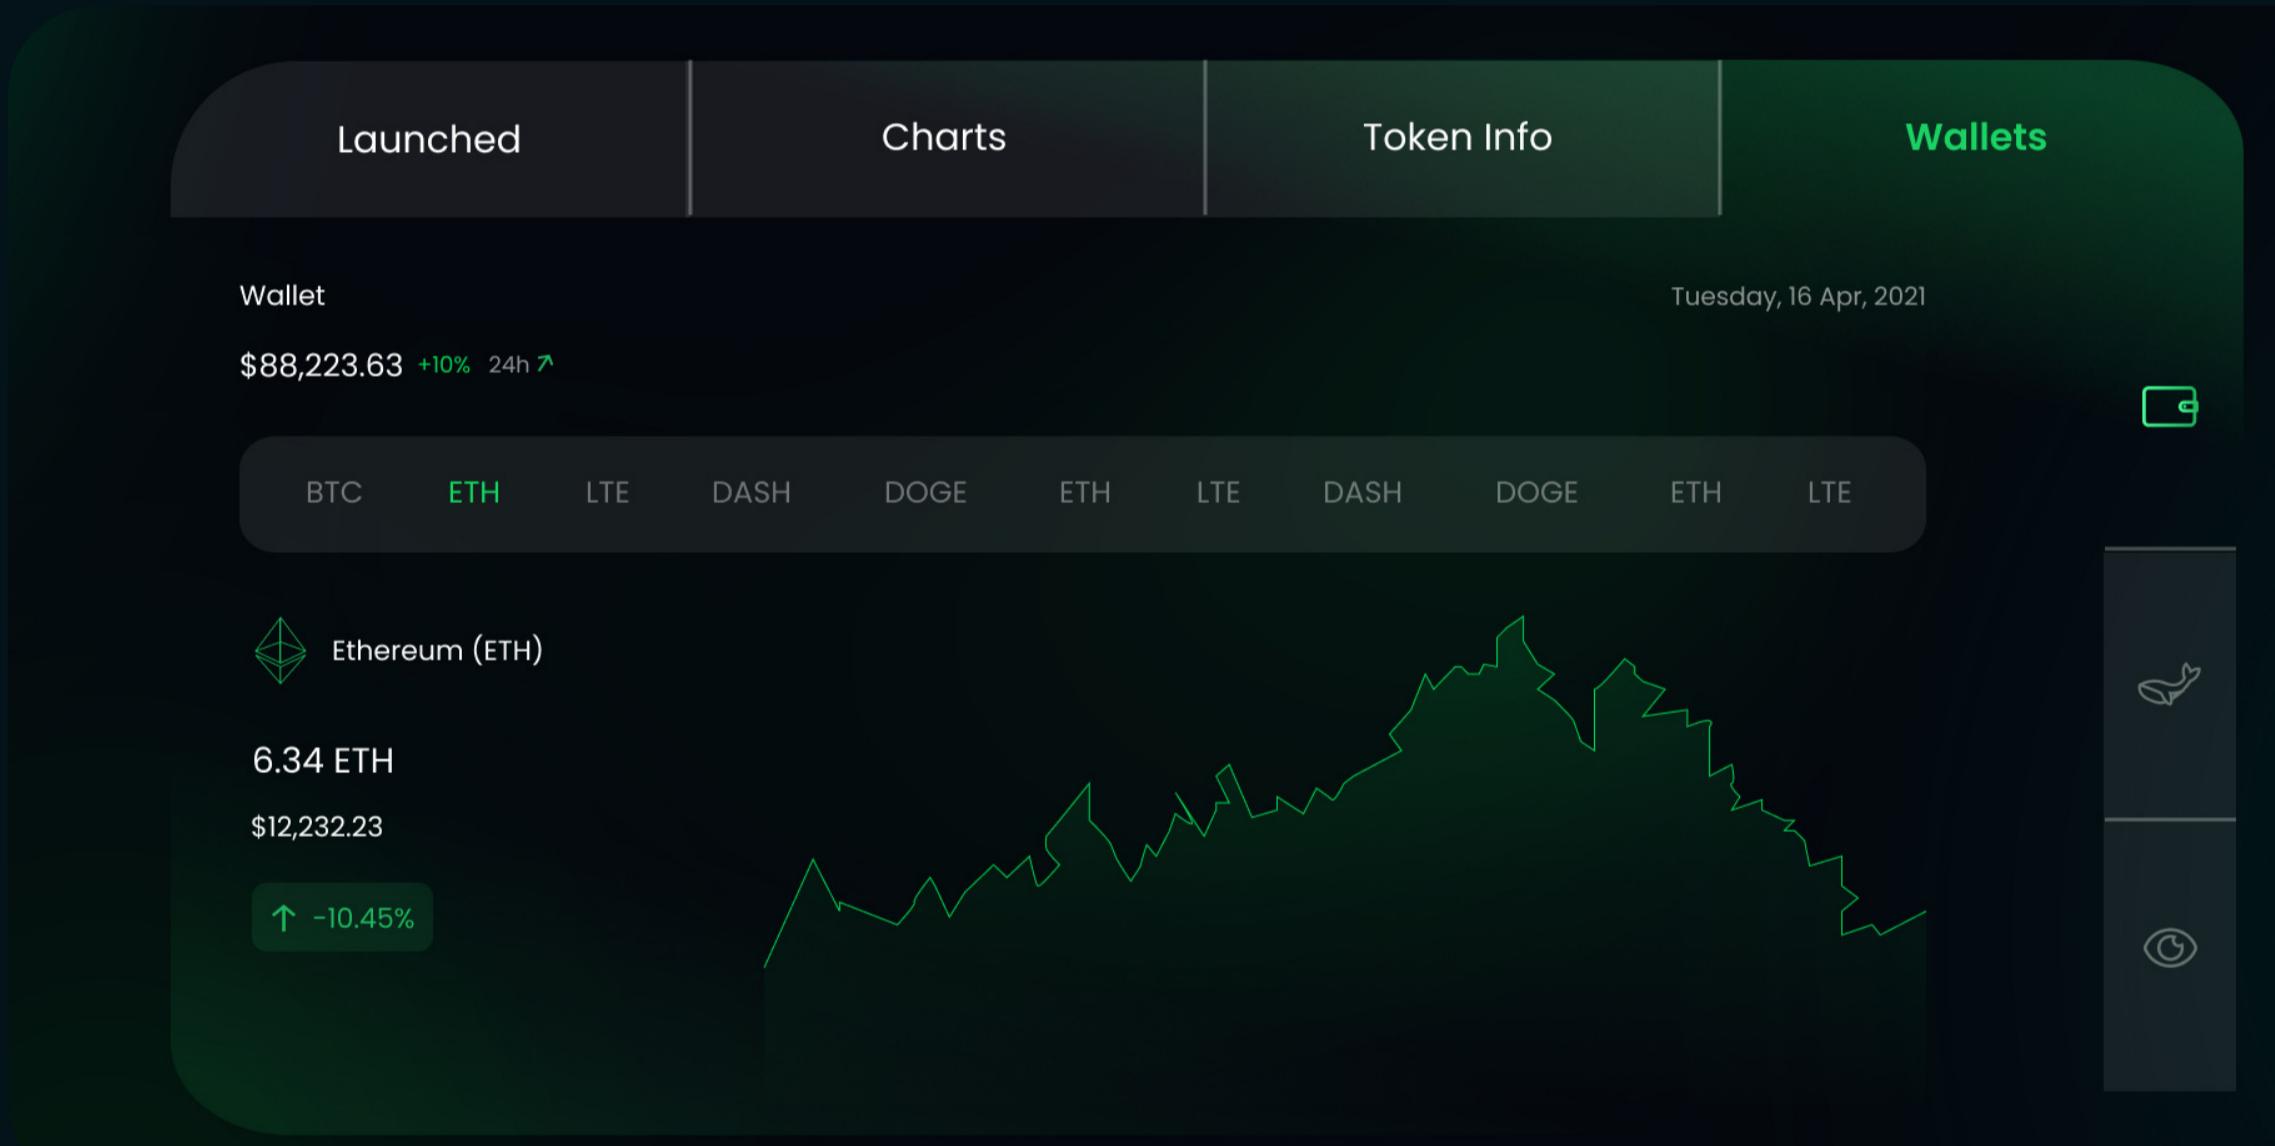

CRYPTOR

10

The performance indicators are based since the time you have them to the watch list. With this information, you can quickly get a sense of how the tokens are performing doing which can help you determine your next moves. From here by clicking on the different icons, you can either get more information about the token, swap it out, or remove it from the watch list.

WALLETS (PERSONAL)

All of the cryptocurrencies that you purchase will be available in your Personal wallet. Here you can see the performance of each token, the quantity of assets, and current price. The total value of your portfolio is also displayed for quick reference.

DASHBOARD

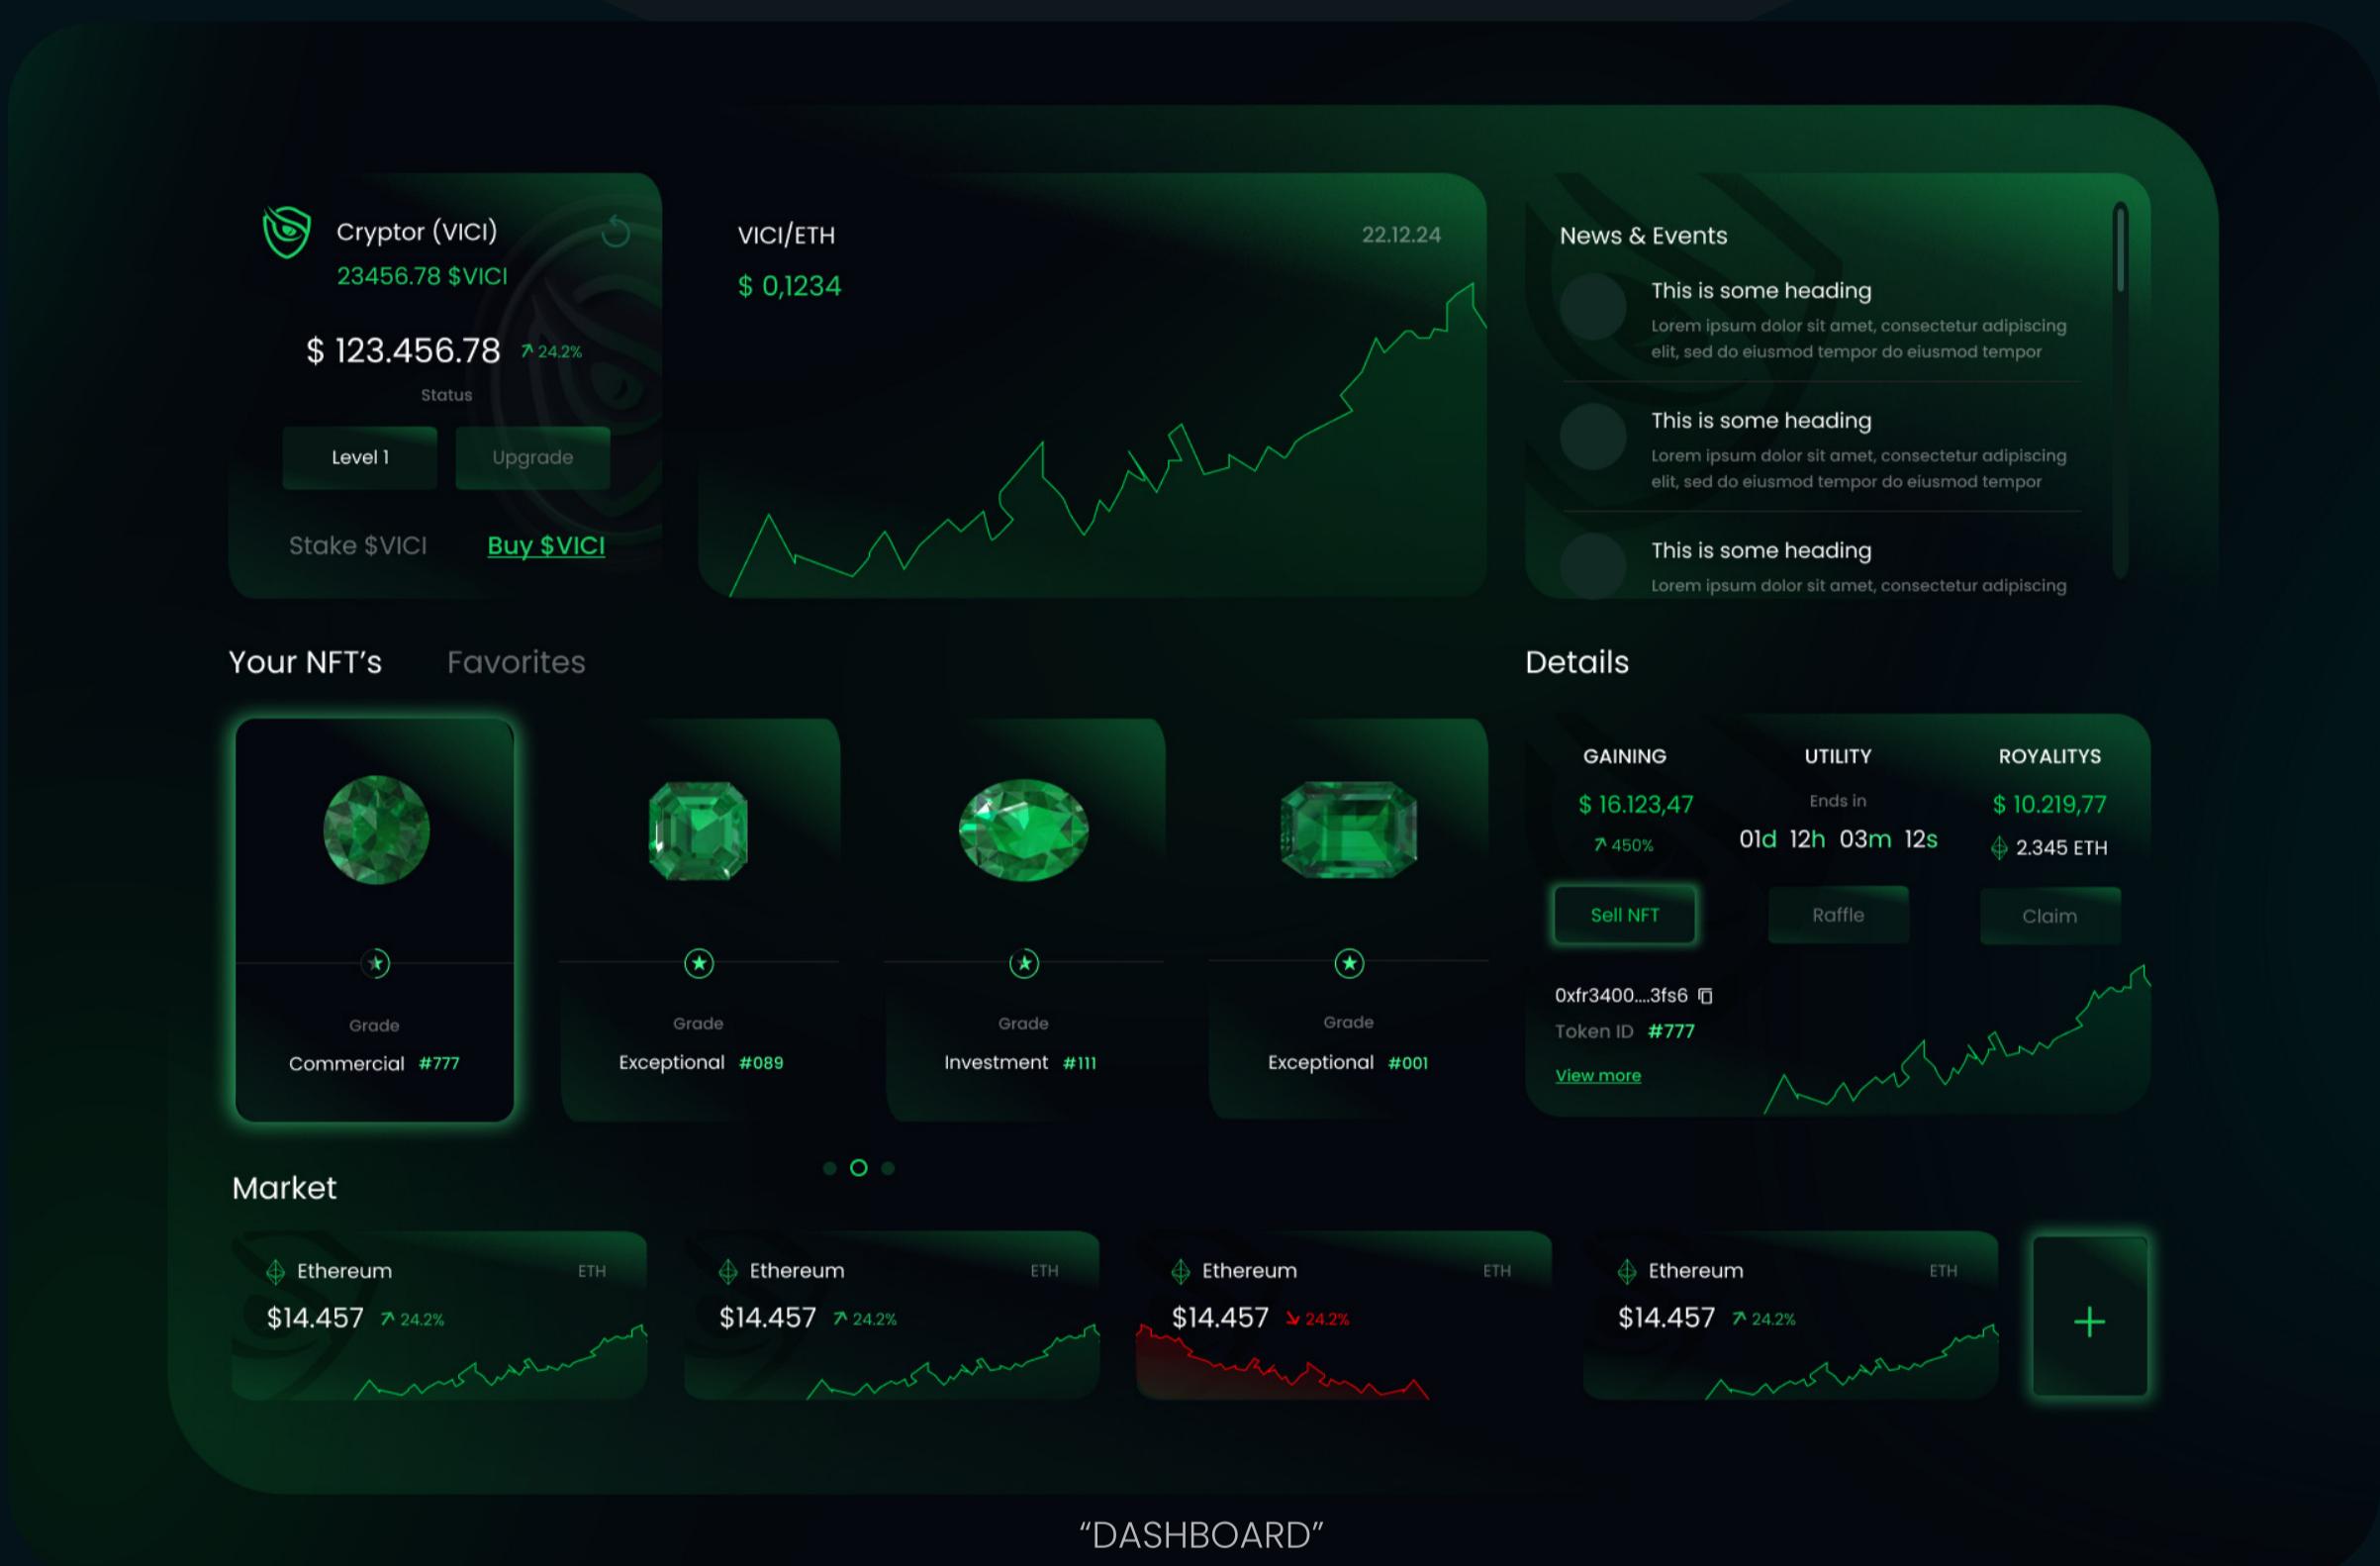

After you have done all of your research head on over to the dashboard. where you can see the value of your \$VICI tokens, the quantity you hold, and quick performance indicator. You can stake the tokens here to earn APY or buy more \$VICI to upgrade your tier. Underneath you will find the status level that you're currently set at. There are three different tiers that can be unlocked based on how many tokens are staked. Each tier unlocks different features in the dashboard - more on this coming soon!

CRYPTOR

11

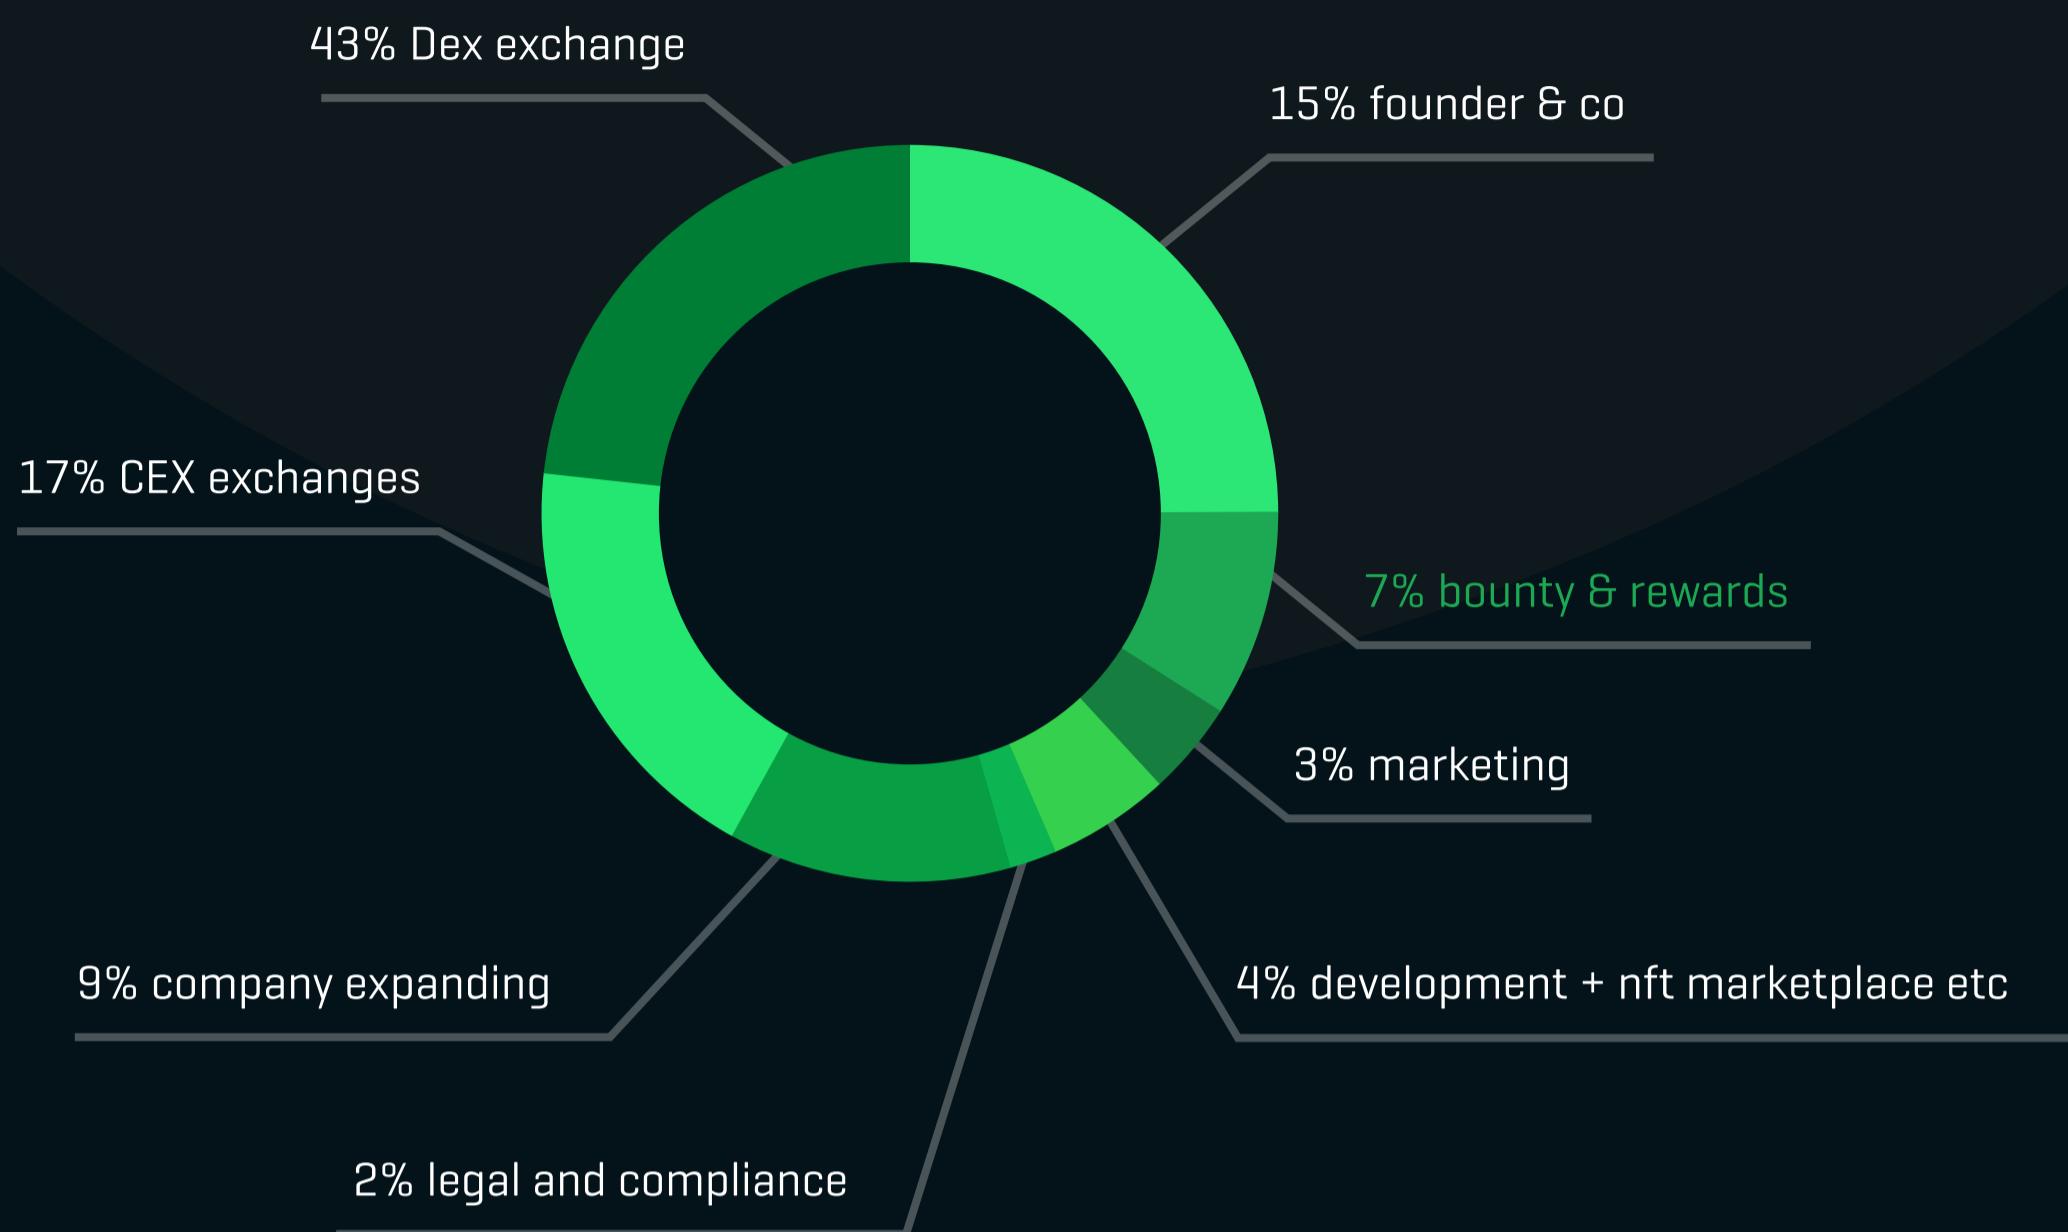

The \$VICI price chart is also available for quick reference along with the news feed which keeps you in the loop with market trends. In the middle section you will see your emeralds NFTs and also raffle possibilities. Buying and selling NFTs or claiming reward royalties can be found here. You can also track your favorite tokens which displays their price performance at a glance. The dashboard really has everything you need in one place but if you need to do some quick research, simply perform your search via the search bar. The network can be filtered at the menu bar.

TOKENOMICS

CRYPTOR's token economics is built with longevity in mind. As with any successful business, the proper allocation of funds and responsible capital expenditures is of absolute importance. This is why we have adopted Julius Caesar's famous words "Veni, Vidi, Vici". Our token was named with this mantra in mind: we came to the aid of crypto investors, we saw what was needed, and we swiftly implemented systems that produce well informed results.

With only 420,000,000 \$VICI in total supply, our token is carefully distributed throughout the economy and various marketplaces to maximize utility and to position it for long term growth. See our token contract: 0x6e01A56F0Fd8e08B84297235c5847dCC469C96C9

TOKEN DISTRIBUTION

- 👉 **DEX** - **43%** of the token supply will be allocated to Uniswap to establish liquidity in the most popular decentralized exchange. DEXs are typically full of crypto savvy investors and they represent the bulk of TVL in DeFi demand.
- 👉 **CEX** - **17%** will be allocated to centralized exchanges which will open up the doors to traditional crypto investors. Plenty of retail investors flock to CEXs so we will be extending our reach to this market.
- 👉 **LEGAL** - **2%** will be allocated to our dedicated legal team who makes sure that we are always up to date and within compliance.
- 👉 **EXPANSION** - **9%** will be allocated to the expansion of our business such as our internal operations and capacity.
- 👉 **FOUNDERS** - **15%** will be allocated to the founding members of CRYPTOR as a compensation for the initial investments and sweat equity that was necessary to establish the business.
- 👉 **MARKETING** - **3%** will be allocated to marketing our business whether it involves advertisements, establishing partnerships, and social media marketing to name a few.
- 👉 **DEVELOPMENT** - **4%** will be allocated to our development team and their efforts on producing new features (ie. NFT marketplace, etc.).

ROADMAP

CRYPTOR's token economics is built with longevity in mind. As with any successful business, the proper allocation of funds and responsible capital expenditures is of absolute importance. This is why we have adopted Julius Caesar's famous words "Veni, Vidi, Vici". Our token was named with this mantra in mind: we came to the aid of crypto investors, we saw what was needed, and we swiftly implemented systems that produces well informed results.

With only 420,000,000 \$VICI in total supply, our token is carefully distributed throughout the economy and various marketplaces to maximize utility and to position it for long term growth. See our token contract: 0x6e01A56F0Fd8e08B84297235c5847dCC469C96C9

01

PHASE 1

21/2022

- Creating a strong brand & concept and turning problems into solutions.
- Website and Application design & development
- ERC20 tokens contracts created and supply of 236,250,000 million tokens minted (18.03.2022) with a total supply of 420,000,000

02

PHASE 2

-
- Litepaper created and project timeline established
- Social media accounts & channels created
- Stealth \$VICI token launch at Uniswap with own funded Liquidity of 6.5 ETH and starting price of 0.0001\$. To provide equitable stakes for all holders we have opted to forego presales.
Giveaways & Jewelry raffles

CRYPTOR

14

03

PHASE 3

-
- Dexchange 2.0 application beta release the ultimate decentralized platform for everyone looking for a comprehensive market overview and state-of-the-art trading tools to securely locate and profit from the next big thing, be it a cryptocurrency or NFT
- Certik audit
- Useful Marketing campaigns

04

PHASE 4

-
- Creating a unique smart swap contract for liquidity staking and passive income possibilities. Rewards (ie. \$VICI tokens and NFTs which come up with a lot of use-cases) will be given to liquidity providers.
- Develop swap & trading bot. Day traders and scalpers can take advantage of automatic buy and sell orders and profit while sitting back and letting the bot do all the work.

05

PHASE 5

-
- Free utility NFTs to all staking investors – enter the Emeraldverse without any risk!
- Detailed whitepaper release Emeraldverse
- Emeraldverse launch will disrupt the world of crypto as you know it.

FINAL THOUGHTS

The world of DeFi is rapidly expanding and with global interest on the rise, we have no doubt that this leading sector in the crypto industry will continue to flourish. CRYPTOR is excited to bring simplicity to the masses where investing, trading, earning, collecting, buying, and selling digital assets can be intimidating. We are positioning ourselves as leaders in this space because there are far too many options and far too little guidance on how to properly invest.

We are bringing a fresh angle to the whole crypto scene and DeFi investing in general and that is through the introduction of precious metals into the mix. As experience professionals in the emerald industry we are excited to share our side of the story. We have a passion in this industry and we want to share it with you while streamlining your research into cryptocurrency investments.

The future is bright for the crypto community as a whole and precious metals are always in demand. It is our pleasure to introduce you to CRYPTOR where we merge these two industries and present them to you in the most efficient and simplistic manner. We are so excited to see the industry evolving before our eyes and we can't wait to deliver to you our full fledged features!

Without you, we are nothing. Let's do this together!

– Patric

“THANK YOU”
